

KS2 Science Concept and Curriculum Map

Living Things	States of Matter	Forces	Energy
Animals, including humans; plants and micro-organisms.	Materials including liquids, solids, gas and plasma	A force is a push or a pull on an object resulting from the objects interaction with another object.	Energy is the ability to do work, evidenced by heat, light, motion, sound, growth and electricity.
Anning		Zephaniah	
<u>Curriculum Content</u>		<u>Curriculum Content</u>	
 Living things & Their Habitats (Living Things Energy) identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant investigate the way in which water is transported within plants explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. recognise that living things can be grouped in a variety of ways explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird describe the life process of reproduction in some plants and animals. recognise that environments can change and that this can sometimes pose dangers to living things 		 Living Things & Their Habitats (Living Things, Energy) describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals give reasons for classifying plants and animals based on specific characteristics. Animals (including humans) (Living Things, Energy) identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function describe the ways in which nutrients and water are transported within animals, including humans. Evolution & Inheritance recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago 	
 Animals (including humans) (Living things, Energy) identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat identify that humans and some other animals have skeletons and muscles for support, protection and movement. 		 recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution. describe the changes as humans develop to old age. 	
 describe the simple functions of the basic parts of the digestive system in humans identify the different types of teeth in humans and their simple functions construct and interpret a variety of food chains, identifying producers, predators and prey. 		or reflect light into the eye	to explain that objects are seen because they give out
 Rocks (States of matter) compare and group together different kinds of rocks on the basis of their appearance and simple physical properties 		objects and then to our eyes	to explain why shadows have the same shape as the

Forces (Forces)

between the Earth and the falling object

explain that unsupported objects fall towards the Earth because of the force of gravity acting

Light (Energy)

describe in simple terms how fossils are formed when things that have lived are trapped within rock

recognise that soils are made from rocks and organic matter.

- recognise that they need light in order to see things and that dark is the absence of light
- notice that light is reflected from surfaces
- recognise that light from the sun can be dangerous and that there are ways to protect their eyes
- recognise that shadows are formed when the light from a light source is blocked by a solid object
- find patterns in the way that the size of shadows change.

Forces & Magnets (Forces)

- compare how things move on different surfaces
- notice that some forces need contact between two objects, but magnetic forces can act at a distance
- observe how magnets attract or repel each other and attract some materials and not others
- compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials
- describe magnets as having two poles
- predict whether two magnets will attract or repel each other, depending on which poles are facing

Sound (Energy)

- identify how sounds are made, associating some of them with something vibrating
- recognise that vibrations from sounds travel through a medium to the ear
- find patterns between the pitch of a sound and features of the object that produced it
- find patterns between the volume of a sound and the strength of the vibrations that produced it
- recognise that sounds get fainter as the distance from the sound source increases

Electricity (Energy)

- · identify common appliances that run on electricity
- construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers
- identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery
- recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit
- recognise some common conductors and insulators, and associate metals with being good conductors.

- identify the effects of air resistance, water resistance and friction, that act between moving surfaces
- recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.

Earth & Space (Forces States of matter)

- describe the movement of the Earth, and other planets, relative to the Sun in the solar system
- describe the movement of the Moon relative to the Earth
- describe the Sun, Earth and Moon as approximately spherical bodies
- use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky.

Electricity (Energy)

- associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells
 used in the circuit
- compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches
- use recognised symbols when representing a simple circuit in a diagram.

States of Matter (States of matter)

- compare and group materials together, according to whether they are solids, liquids or gases
- observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C)
- identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.

Properties & Changes of Materials (States of matter)

- compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets
- know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution
- use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating
- give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic
- demonstrate that dissolving, mixing and changes of state are reversible changes
- explain that some changes result in the formation of new materials, and that this kind of change is not
 usually reversible, including changes associated with burning and the action of acid on bicarbonate of
 soda.

Skill Progression

Questions and answers

- I can ask relevant scientific questions
- I can use observations and knowledge to answer scientific questions
- I can set up a simple enquiry to explore a scientific question

Observation

- I can set up a test to compare two things
- I can set up a fair test and explain why it is fair
- I can make careful and accurate observations, including the use of standard units

Gathering and recording data

- I can use equipment, including thermometers and data loggers to make measurements
- I can gather, record, classify and present data in different ways to answer scientific questions
- I can use diagrams, keys, bar charts and tables; using scientific language
- I can use findings to report in different ways, including oral and written explanations, presentation
- I can draw conclusions and suggest improvements

Skill Progression

Questions and answers

• I can plan different types of scientific enquiry I can control variables in an enquiry.

Observation

• I can measure accurate and precisely using a range of equipment

Gathering and recording data

- I can record data and results using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs
- I can use the outcome of test results to make predictions and set up a further comparative fair test
- I can report findings from enquiries in a range of ways
- I can explain a conclusion from an enquiry I can explain causal relationships in an enquiry
- I can relate the outcome from an enquiry to scientific knowledge in order to state whether evidence supports or refutes an argument or theory

Class objectives have been split into year groups – all of the pupils within a class will complete the same learning (either introduction, or revision depending on year group), but the Year groups will be assessed by their year objectives, rather than class objectives by the use of assessment for learning within a unit and summative assessment at the end of a unit. Pupils will be considered 'Working At' of they have met all of the objectives within their year group, and 'Working Towards' if they are missing knowledge.
